ABSTRACT OF THE DISCLOSURE

A system and method for enrolling patients into a medical study, includes: a database component operative to maintain a medical practice database component and their corresponding plurality of specialties and a clinical studies database component and their corresponding plurality of medical studies. The system further includes a communications component to alert the medical practices of the medical studies and observe changes to the database components. The system also includes a processor programmed to update the database components, periodically match compatible medical specialties with the medical studies, and generate reports of the matched medical practices in the medical practice database. The system also includes a fee database component which the processor uses to calculate a fee for conducting the study.
